

3M Direct Bury Splices: The most reliable option on the market.

3M

When your landscape irrigation and outdoor lighting application projects need the best, don't settle for imitators or generic splices. They may seem more cost effective at the start, but you'll be paying more for the issues they cause down the road. Trust the job to the 3M Direct Bury Splice courtesy of Paige Water Solutions. They're water-resistant, made in the USA and can be installed above or below ground.

Product highlights
